UX principle reminder: Your users don't care how clever your design is—they care about whether it solves their problem. Today I removed 3 features from a product because they were adding complexity without adding value. Sometimes less really is more.

Just deployed our new microservices architecture and we're seeing 40% faster load times across all applications. The migration took 3 months but the performance gains are worth every late night. Next up: implementing AI-powered caching strategies.
